Bangalore, India · +91 97915 83755 · ellizabethsobiya@gmail.com · [LinkedIn](#) · [Portfolio](#)

PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years delivering fintech and AI platforms across gold valuation, property document analysis, and waste management domains. At Nighthack Labs, led a cross-functional team of 3 developers and 1 QA engineer through agile sprints, driving system design decisions, client communication, and end-to-end product delivery across multiple live products. Known for catching production issues early through structured pre-release performance and security testing.

SKILLS

Frontend: JavaScript (ES6+), TypeScript, React.js, Redux Toolkit, TanStack Query, Zustand, Tailwind CSS, Material UI, HTML5, CSS3, Webpack, Accessibility

Backend & APIs: Node.js, NestJS, FastAPI, REST APIs, GraphQL, Prisma, Sequelize

Databases & Cloud: PostgreSQL, MySQL, Supabase, AWS S3

Integrations: Razorpay, Kaleyra (OTP/SMS), MCube (click-to-call), OneSignal, Firebase, Excel.js, Metabase

Testing, Tooling & AI: Jasmine, WebDriver, Git, CI/CD (GitHub Actions), Chrome DevTools, Agile/Scrum, Code Reviews, System Design, Performance Optimisation, OpenAI API, Prompt Engineering, Claude, Codex, Cursor

WORK EXPERIENCE

Software Engineer · Nighthack Labs

Jun 2024 - Present

Land Valuation Platform (PropTech for banking - automated property document analysis for loan processing)

Stack: React, TypeScript, Material UI, TanStack Query, Zustand, NestJS, PostgreSQL, OpenAI API, Excel.js

- Led a 4-member team (3 devs, 1 QA) through agile sprints, conducted regular code reviews, and delivered V1 on schedule by running POCs for all major architectural decisions before sprint work began - keeping delivery predictable and reducing time lost to competing approaches.
- Identified and resolved a race condition in the case creation flow during pre-release pen testing, and implemented polling for OCR-triggered case completion updates - both caught by consistently scheduling performance and pen testing within each sprint cycle.
- Cut property valuation turnaround from 2 days to 2 hours (retail) and 1 week to 2 days (corporate) by building an AI-assisted document analysis system using OpenAI APIs and OCR, surfacing address mismatch flags and rate anomalies directly in the UI.
- Built multi-step valuation forms handling complex conditional field logic and document state across user roles in React, TypeScript, and Material UI - TanStack Query for server state, Zustand for local UI state.
- Developed an Excel.js-powered report generator producing bank-ready valuation templates, eliminating manual document formatting for client firms.

Gold Valuation System (Retail gold valuation platform - KYC, gold purity assessment, and payment for 2,000+ customers across India)

Stack: React, TypeScript, NestJS, Zustand, Material UI, Razorpay, Kaleyra, MCube, Metabase, PostgreSQL

- Built a live gold rate valuation UI with real-time market price feeds and inline purity-adjusted value calculations, alongside KYC verification and intake workflows. Migrated state management from Redux Toolkit to Zustand to reduce overhead as the platform scaled.
- Built a Razorpay payment flow with debounce, and real-time status updates, reducing transaction errors by 25% post-launch.
- Integrated Kaleyra for OTP-based identity verification and MCube for click-to-call telesales directly from the agent dashboard.
- Implemented session storage to persist form data across network drops in low-connectivity field areas, preventing data loss and reducing re-entry friction during gold intake sessions.
- Integrated Metabase dashboards for operations teams, reducing manual data review time by 35%.

Waste Management Platform (Government smart city initiative — real-time waste tracking across field agents)

Stack: React.js, React Native (Expo), Material UI, Tailwind CSS, FastAPI, PostgreSQL, OneSignal, Firebase

- Built waste-tracking dashboards in React.js and Material UI with FastAPI REST integration, improving data retrieval speed by 30%.
- Extended the platform to Android via React Native (Expo), integrating OneSignal and Firebase push notifications to keep field agents updated on collection schedules in real time.

Document Analysis Platform (AI-powered document intelligence - shared across Gold Valuation KYC, Land Valuation, and internal projects)

Stack: React.js, Tailwind CSS, OpenAI API, Supabase, PostgreSQL

- Built a React.js and Tailwind CSS UI for document upload and context-aware Q&A via OpenAI APIs - deployed as shared infrastructure across Gold Valuation KYC flows and the Land Valuation document analysis pipeline.
- Reduced user interaction time by 40% by surfacing document-context suggestions inline as users typed queries, minimising context-switching between document reading and question formation.

Software Developer (Part-time) · ViviMart

Jan 2024 - Mar 2024

- Built and shipped mobile application features in React.js and React Native (Expo) as part of a short-term engagement.

Software Developer · Itera Solutions

Apr 2023 - Sep 2023

- Led frontend performance optimisation efforts - achieved 75% faster page loads by auditing and refactoring redundant useEffect hooks and eliminating unnecessary re-renders across the MERN stack.
- Improved PDF/Excel export performance via Sequelize query optimisation, and boosted testing efficiency by 30% through Jasmine-based automation test contributions.

Frontend Developer Intern · Futuryze Digital Venture Studio

Nov 2022 - Feb 2023

- Shipped React-Gatsby and Tailwind CSS pages with 50% performance improvement via lazy loading and WebP optimisation.

OPEN SOURCE PROJECTS

HawkDoc - Open-source collaborative document editor

- Engineered a high-performance editor using React, TypeScript, and Lexical, boosted rendering efficiency for extensive documents through strategic DOM manipulation. Leveraged AI-driven development tools including Claude, Codex, and Cursor to accelerate feature delivery.
- Implemented real-time multi-user collaboration using Yjs CRDTs and Hocuspocus server, with Redis for ephemeral sync state and PostgreSQL for persistent document history, resolving concurrent edit conflicts without operational transforms.
- Shipped PDF export and document template rendering as standalone features
